Leaf Spot Tree Disease: Prevention and Control

The pathogen has the potential to infect oaks and other trees and shrubs elsewhere in the United States. Severity Index SI increases with time, becoming more limiting after flowering and reaching maximum values at the end of each cropping cycle.

Leaf Spot Tree Disease: Prevention and Control

Rhizoctonia root and crown rot Robust, septate, pigmented, branching mycelia Pathogen: Rhizoctonia spp.

Escallonia leaf spot / RHS Gardening

Fruit and calyx infection also occurs. Fungicide application may be necessary to prevent re-infection see below. The 4-H Name and Emblem have special protections from Congress, protected by code 18 USC 707.

Madrone (*Arbutus menziesii*)

Waterman AM; Aldrich KF, 1954. Promptly prune out any blighted tissue; remove infected plant parts through cutting 8 to 12 inches below diseased tissue; between cuts, disinfect pruning tools using a 10 percent bleach solution. Also, it is a good idea to prune any low branches that may touch the ground, to keep snails from easily accessing citrus tree interiors.

Pest & Disease Control for Walnut Trees

Dwyer, Director, MSU Extension, East Lansing, MI 48824.
