## A Monograph of British Graptolites

A revision of Ordovician series and stages from the historical type area. From this bud is developed the first zooid and first serial theca of the colony.

## Chapter 10 Patterns of Evolution in the Graptolites

In the family of the Diplograptidae the branches are reduced to two; these also coalesce similarly by their dorsal walls, and the polypary thus becomes biserial diprionidian, and the line of the nema is taken by a long axial tube-like structure, the nemacaulis or virgular tube.

**Oliver M.B. Bulman (1902)**

Handbuch der Paläozoologie 2D: 1—92, Stuttgart. Global Stratotype Section and Point for base of the Ordovician System

## Chapter 10 Patterns of Evolution in the Graptolites

The Cambrian System in Eastern Asia. Secondary endpoints were incidence of postoperative complications.

## Graptolite Collection

Graptolites from the Ontiklan Limestones Ordovician of Öland, Sweden: 1, Dendroidea, Tuboidea, Camaroidea, and Stolonoidea. The Yongwol Group Cambrian-Ordovician redefined: a proposal for the stratigraphic nomenclature of the Choson Supergroup. The zooids may have helped the colony to move and possibly secreted gas or low-density fat to help the colony to rise through the water.

## Oktavites (Monograptus) spiralis

Graptolites had a worldwide distribution and evolved very rapidly, making them important zone fossils used to date and correlate rock sequences

around the world.
