“Crustacea”: Decapoda

Among the decapods, the ancient palinurans, their modern brachyuran 10-legged crab derivatives, and the dendrobrachiate and stenopodid shrimps dominate in tropical and temperate marine shallows. Svensk taxonomisk databas Poore, G.

Malacostracan

Journal of Paleontology 63, 64—69, doi:. They are distinguished from other groups of arthropods, such as , and , by the possession of two-parted limbs, and by their , such as the stage of and.

Figure 7 from Crabs dredged off the Ogasawara Islands (Crustacea, Decapoda, Brachyura)

Eumalacostraca, Superorder Eucarida, Order Decapoda, Suborder Pleocyemata, Infraorder Anomura, Family Galatheidæ Pelagic red crab. The neuronal circuits of the stomatogastric ganglion STG of crustaceans constitute a powerful model for mechanisms in neuromodulation. As the intergeneric relationships were largely unresolved in the present attempt, the hypothesis of evolution of deep-sea sponge-associated taxa from shallow-water free-living species could not be verified here.

Decapod Crustacean Phylogenetics

Body structure of a typical crustacean — krill The body of a crustacean is composed of segments, which are grouped into three regions: the cephalon or , the pereon or , and the pleon or. Eumalacostraca, Superorder Eucarida, Order Decapoda, Infraorder Brachyura, Family Cancridæ Adults 15-18 cm across reddish-brown carapace; claws tipped with black; underside of body with red spots; juvenile carapace usually covered with hairs.
