George IV Visit

The inclusion of the turbulent Richard Elsam is a complete mystery and the inclusion of Gilbert Laing Meason, a client of Archibald Elliot at Lindertis House, Angus, in 1815-6, raises the possibility that Hamilton may have worked there. These doors are separated by a Diocletian window on a level with the tops of the doors, which aligns with round headed arches inside passage, all supporting a small circular ceiling, raised on pendentives.

L'Architecture néo

This may have been his first office. From 1796 the brothers became involved in large amounts of work for the City of Edinburgh and according to the Minutes of the Town Council, they took the lion's share of any work going, which suggests that the family may have had connections with the City during the eighteenth century. General exterior views for CHS exhibition.

Glasgow Necropolis

. The ceiling will be in the form of a segment of a circle, or an elipsis, and will be nearly 40 feet high.

George IV Visit

By 13 February 1830, the exhibition had raised £3,000 and this provided the Trustees with a further? But this was a sop to professional opinion because in September the Trustees decided firmly that they would not accept any proposal to complete the cross building.

The Carter

By 1819 Hamilton would be calling himself an 'architect' in the Postal Directories but in the year following the exhibition he was involved in his first recorded piece of building speculation. The blocking course to be prepared having the upper and inner surfaces droved and secured with joints by inserting pieces of cast iron in the manner of dowells.

Thomas Hamilton

Durante este tiempo adquirió un conocimiento considerable de la mampostería de piedra. The symbolism and characteristics of the Burns Monument would have been clearly readable to an eighteenth century gentlemen.

Joe Rock

If this is not possible he will make new plans free of charge. They submitted an elevation in 1792 for Lots 1 and 2 and built what became No's 4 to 10 Castle Street.

Glasgow Necropolis

Haig fought in Egypt and South Africa and in Europe in the Great War, when he was in command of the expeditionary forces. By process of elimination and by observing that the rusticated basement is more 'designed' in execution than the rather haphazard chipped stone of the neighbouring houses, it is possible to suggest that Hamilton built No's 28 and 30 Albany Street, but with the elevations swapped so that the entrances are side by side rather than at the ends of the two feus.
