## Natural Resources Wales / Protecting wild birds during forestry operations

Background Forest habitats support more bird species than other habitat types.

### The Basics: Forest Management for Birds

Thankfully, forest landowners and managers can do something about most of these stressors. Forest managers must consider this carefully when planning harvests. However, some birds do require a specific type of tree, a conifer, for example, to be present in order for a forest to be habitable.

### Home Page

All types of forests are important for birds, and each bird species is adapted to the forest in which it resides.

### Forest Atlas

Proceedings of the symposium on management of forest and range habitats for non-game birds.
