Restoration in the face of climate change: a case study from the Dorset Heaths

For these applications, in order to mitigate any impacts under the Habitat Regulations, you will need to accompany your application with a S.

Individual heath area estimates for land cover types in Dorset: 1978

Unilateral Undertakings Please find below Unilateral Undertaking templates for completion in circumstances where habitat contributions only are required: Please note that the relevant legislation does not permit the submission of Unilateral Undertakings or other forms of S. This study suggest that restoration techniques are likely to change in their relative effectiveness as climate changes and that this may have different consequences for low and high trophic level species. The majority of Dorset heaths are designated Site of Special Scientific Interest SSSI and above such as Special Protection Areas SPAs and Special Areas of Conservation SACs.

Dorset Heaths (Purbeck and Wareham) and Studland Dunes

Typical mosses of the wet heath include *Sphagnum compactum*, S. So far, conservation successes include disconnecting the Port Sudan power line, which has killed hundreds of endangered Egyptian vultures, and the signing of a responsible hunting declaration by prominent hunters in Lebanon, Jordan, Syria, Palestine, Egypt, Yemen, and Ethiopia. The changes observed in Dorset are fairly typical of those occurring elsewhere on the heathlands of southern England.

Modelmaking graduate joins...

The fluffy *Bombylus minor* feeds on nectar in flowers like Wild Thyme and does not dwell in garden environments like its larger and much more common relative, *Bombylus major*.

Restoration of plant

This paper outlines the concept of ancient woodland as it has developed in GB, and how this idea gave rise to the ancient woodland inventories. Not only was Baker inspired by , but his imagination was fired by tales from his great Uncle Richard Baker who had previously travelled to Canada. After , a lecture tour into Austria, Germany and other countries launched his concept of an international Green Front to promote the idea

of reforestation worldwide.

European Site Conservation Objectives for Dorset Heaths SAC

In places, where heather *Calluna vulgaris* occurs in mature stands, lichens of the genus *Cladonia* are very abundant.

Chamonile

The Society was established in 1913 and has approximately 4,000 members worldwide, and membership is open to all with an interest in ecology. Deliberate and accidental fires can destroy whole colonies of wildlife.
