Illinois State Geological Survey County Coal Data and Maps

Drilling for mineral resources near Canyonlands National Park, Utah Climate change combined with overlapping high-intensity land uses are likely to create conditions detrimental to the recreation economy, wildlife habitat, water availability and other resources in hyper-arid landscapes, or drylands, in the future, according to a paper published in Ecosphere. These publications represent most of the research work done by the USBM in the fields of mining technology, mine safety and health, and the mineral industry.
