External Link HTML Human Evolution This site provides an overview of human evolution, with links to photos of fossil skulls and articles about recent research. Through his extensive study of fossil deposits in the Paris Basin, Cuvier went on to identify what he thought were periods of mass extinctions, or catastrophes, in Earth history when large numbers of species went extinct in very short periods of time see unit 1.

Human Evolution: An Illustrated Introduction

Is mass extinction merely background extinction writ large? The longer the time after eruption, the more tracks that will accumulate, depending on the concentration of uranium in the glass. The only rule he could discern was valid for groups of related species, or clades.

Human Evolution: An Illustrated Introduction by Roger Lewin

Cladistic analysis of hominoids is no exception. Yet the exact nature of our evolutionary relationships has been the subject of debate and investigation since the great British naturalist published his monumental books 1859 and 1871. Polyphyletic groups arise when members of different lineages converge on a similar adaptation; pheneticists would recognize these species as a natural group.
