It refers to structures buildings, monuments, menhirs built out of large stones, during the Neolithic era of the Stone Age, and the later Chalcolithic and Bronze Ages. The work of the Renaissance masters spread across Europe, and long after the era ended, architects in the Western world would find inspiration in the beautifully proportioned architecture of the period. This early tradition featured a wide central aisle or nave, usually flanked with narrow aisles on each side.

Built between 1070 and 1120, the is a good example of this transitional architecture, with a Byzantine-domed apse and an added Gothic-like steeple. In this book, Palladio showed how Classical rules could be used not just for grand temples but also for private villas. The pointed arch relieved some of the thrust, and therefore, the stress on other structural elements.
