Crawford has led through action and has shown others how research and teaching can best complement each other for the good of society. Schurerth fDennis Schurerth has more than 45 years of technical and managerial service accomplishments within the electric power generation business and is currently considered by many to be the industry authority regarding titanium tubed main steam surface condensers.

Partial list of Fatigue Publications

Elsayed has made outstanding accomplishments in three major areas.

American Society of Mechanical Engineers. Pressure Vessels and Piping Division. Design and Analysis Committee

His work in this area includes critical information for developing detailed descriptions of the phenomena responsible for knock in spark-ignited engines and plasma assisted combustion. He has excelled at laser Doppler flow measurements and hydraulic engineering in water turbines, pumps, and other products, such as valves, sprays and process equipment.

ASME 2014 FELLOWS [Mechanical Engineering]

The local maximum range of von Mises shear strain is the most important determinant of low cycle fatigue damage, with the local stress conditions

contributing to a mean stress effect. He has made contributions to the fields of design, engineering maintenance, project management of technologically complex nuclear submarines, diving and ship salvage, and emergency response.

the 2010

He has made significant contributions in mechanical engineering as an educator, researcher and administrator.
