### Ever Wondered What Computers are Going to Be Like in the Future?

Adelman coded a problem using the four nucleotides that combine to form DNA and discovered that the DNA solution was accurate. A set of strands is manufactured so that all conceivable answers are included. The advantage of DNA computing is that it works in parallel, processing all possible answers simultaneously.

### Is There a Probabilistic Computer in Your Future?

Researchers from Purdue University and Tohoku University published a proof-of-concept study in Nature last week in which they created and used probabilistic bits p-bits to factorize integers up to 945.

### The Computer in Your Future

S degrees from Oregon State University and is the recipient of numerous awards including, the 1999 Business Advisory Council Most Influential Faculty Member Award, the 1997 Business Advisory Council Undergraduate Teaching Award, and the 1996 Order of Omega Award as an Outstanding Professor at the University of Oregon. Computers of the future are surely going to be faster, smaller, and more ubiquitous. Similarly, biological computing addresses how the body itself can compute, how we can think about genetic material as computing.

### Say goodbye to your mouse and keyboard, new user interfaces to redefine humanity: Future of computers P1

Buildings, highways, vehicles and even the clothing you wear might have built-in computer elements. And that's the core principle that will guide the future UI devices you're about to learn about.

### Computers and the World of the Future

Employed in areas once thought to be exclusively the province of the human mind, the computer rendered profound changes in the traditional ways and means of decision making. We've come a long way to be sure, but when it comes to the field of user interface UI, the means by which we interact with computer systems, we haven't seen anything yet. First, it was punch cards; then it was the iconic mouse and keyboard.
