Sampling for bacteria requires special attention, because bacteria may be present as individual organisms, as clumps, or mixed with or adhering to dust or covered with a protective coating of dried organic or inorganic substances. Settle plates Filtration Air drawn through a filter unit; particles trapped; 0.

## Environmental Sampling

Sedimentation or depositional methods use settle plates and therefore need no special instruments or equipment. Before sampling begins, decisions should be made regarding whether the results are to be qualitative or quantitative. Qualitative determinations of organisms from surfaces require only the use of selective or non-selective broth media.
