

Radiation conditions on the Greenland Ice Sheet

Geographisches Institut ETH - Greenland is careening toward a critical tipping point for ice loss

Description: -

-

Ice sheets -- Greenland -- Measurement.

Solar radiation -- Greenland -- Measurement.

Snow -- Greenland -- Measurement. Radiation conditions on the Greenland Ice Sheet

-

Heft 56

Zürcher geographische Schriften ; Radiation conditions on the Greenland Ice Sheet

Notes: Includes bibliographical references (p. 117-120).

Climate change: How quickly are ice sheets melting on Earth?

A record low was set for October 2018 at DMI Summit, including a new record-breaking cold temperature of -55.

Op

In March 2008, a 400-square kilometer 160-square-mile piece of the Wilkins Ice Shelf broke off of the Antarctic Peninsula. Description Changes in the climate around Greenland can have a world-wide effect.

Microbes fuelled by wind

November 26, 2019 About Our Organization Issued annually since 2006, the Arctic Report Card is a timely and peer-reviewed source for clear, reliable and concise environmental information on the current state of different components of the Arctic environmental system relative to historical records.

Climate change: How quickly are ice sheets melting on Earth?

The study shows that overall, there has been a 65 per cent increase in the rate of ice loss over the 23-year survey. Antarctica would shrink by more than a quarter as the western part shrunk into the sea.

Greenland is careening toward a critical tipping point for ice loss

Ice melt across the globe raises sea levels, increases the risk of flooding to coastal communities, and threatens to wipe out natural habitats which wildlife depend on.
