How to Subtract Decimal Numbers

When teaching subtracting without regrouping, it is important to ensure that the digits are lined up carefully. Just like when working with whole numbers, if the digit we are subtracting from is less than the digit we are subtracting, we then take 1 away from the digit to our left so that we can add 10 to the digit we are subtracting from. We can read this as thirty-eight and eleven-hundredths.

The most common mnemonics for remembering this order of operations are: PEMDAS - Parentheses, Exponents, Multiplication, Division, Addition, Subtraction. We can read this answer as seventy-seven dollars and thirty-one cents. If the sum of two added numerals adds up to more than ten, we will just increase the sum of the first numerals to the left by one.
