Medical control. Quality assurance in prehospital care

Building the field of health policy and systems research: an agenda for action. Husum H, Gilbert M, Wisborg T, et al.

Clinical leadership in paramedic services: a narrative synthesis

Blue cells in the table represent system inputs, yellow represents system outputs, and green represents goals and outcomes. The proposed tool provides an adaptable template for national, regional, or city-wide EMS assessment. The scholarship surrounding contemporary paramedic professionalization and leadership facilitated critical analysis of the evidence for medical direction and clinical governance. Proposed data collection activities and data sources are summarized in Table and are described in detail below.

Assessment of pre

Still there exists a substantial need for evidence to improve our understanding of the capacity of such systems as well as their strengths, weaknesses, and priority areas for improvement in low-resource environments. Medical control. Quality assurance in prehospital care

In: Cone D, Brice J, Delbridge T, et al. Nonopioid analgesic agents were used in 32.

[Quality of pain management in preclinical care of acutely ill patients]

The medical direction, clinical governance and paramedic clinical leadership models are grappling with the challenges of health system fragmentation and efforts to integrate paramedic services into health systems. Hence, EMS is a critical component of the health systems and is necessary to improve outcomes of injuries and other time-sensitive illnesses. The concept of paramedics developing more autonomy and higher levels of clinical judgment and decision making is an important component of the collective vision in these papers ;.

[Quality of pain management in preclinical care of acutely ill patients]

In total, 12 papers related predominately to UK paramedic services, with six from Australia and New Zealand, and two from Canada. Int J Emerg Med 11, 53 2018.
