

# Determination of Tungsten and Associated Elements in Natural Brines and Related Process Solutions by Inductively Coupled Plasma Spectrometry.

s.n - Magnesium nitrate as a chemical modifier to improve sensitivity in manganese determination in plant materials by tungsten coil atomic emission spectrometry, Journal of Analytical Atomic Spectrometry

Description: -

-Determination of Tungsten and Associated Elements in Natural Brines and Related Process Solutions by Inductively Coupled Plasma Spectrometry.

-

Report of investigations (United States. Bureau of Mines) -- 8945Determination of Tungsten and Associated Elements in Natural Brines and Related Process Solutions by Inductively Coupled Plasma Spectrometry.

Notes: 1

The most ancient known oil wells are those at Ephrata and the Kerch coast in the Chinese province of Sychuan.

**ASTM D 1129 : 2013 : R2020 Standard Terminology Relating to Wate**

The worse results for recovery were obtained for geothermal water samples, which could be caused by the effect of the matrix or natural high temperature of the water tested. However, for several specialised topics such as Glasses and Catalysts the amount of information has both increased in relevance and quantity.
