Inequality, stress, and health: The Whitehall Studies

The percentage of civil servants aged under 30 is the same as in 2010 14% , but has increased after reaching a low of 9% in 2014 following recruitment freezes, which had an impact on the age profile of the civil service, and possibly its skills base.

Cohort Profile: The Whitehall II study

The civil service is traditionally a very behind-the-scenes organization. He grew up in Derbyshire. Cholesterol was measured with the use of a Cobas Fara centrifugal analyser Roche Diagnostics System, Nutley, NJ, USA.

Top UK civil servants to face Whitehall history lesson at new leadership academy

It is now directed by Professor Mika Kivimäki.

Meet John Manzoni, the new guardian of Civil Service reform

Non-fatal MI was defined following MONICA criteria based on study electrocardiograms ECGs , hospital acute ECGs and cardiac enzymes. But I observed that a little on the inside too.

Stress

Obesity was more prevalent among those in lower status jobs, and the risk factor for increased morbidity and mortality that differed most among job categories was smoking. But the big upside of it is, I think, you do come out of it feeling very resilient and capable of handling most things.

Whitehall's take on Johnson's reshuffle: this prime minister is insecure

They also reported less control, less use of skills, and less variety at work, as well as a more demanding workload and more psychological stress at work. The findings led to the establishment of the second Whitehall Study in 1985, to further investigate the social inequalities of health, and continues to the present day. The Seven Countries Study, for example, contributed profoundly to methodology and to epidemiological evidence for the population causes of CHD.

Whitehall Study

The studies were designed in this manner as an attempt to avoid certain research drawbacks associated with generalized groupings—drawbacks that otherwise would result from the diversity of occupations within social classes—which in turn would tend to reduce the objectivity of any analysis.
