The Zoological Miscellany

The muzzle was lengthened into a snout, but, as well as I could judge from many exposures, it tapered gradually without a furrow, and resembled that of Delphinorhynchus. The animals were spotted black and white. If it is multi volume set, then it is only single volume, if you wish to order a specific or all the volumes you may contact us.

As this reprint is from very old book, there could be some missing or flawed pages, but we always try to make the book as complete as possible. Journal of Cetacean Research and Management 7 3 , 271—286. NO changes have been made to the original text.

The zoological miscellany : being descriptions of new, or interesting animals : Leach, William Elford, 1790

Gosse estimated his cetaceans to be about 30 feet ~9.

The Zoological Miscellany

Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. Mesoplodon densirostris is believed to inhabit tropical through warm temperate waters across the world MacLeod et al 2006 , so the vague locality is not an issue. As these are old books, we processed each page manually and make them readable but in some cases some pages are blur or missing or black spots.

The Zoological Miscellany, being descriptions of new and interesting animals. by LEACH, W.E.

Two species only were known to Linné, who re ferred them to his artificial Genus Phalangium

Lord Geekington

They suspected it may have been a color variant or juvenile specimen of the previously observed species, which implies it was similar

morphologically. Having been familiar with several species of Delphinidae in former Atlantic voyages, I had taken for granted that I should meet with some in this; and wishing to settle the question whether any of the true Dolphins spout, I had studied the Order a little before sailing; and, in particular, had made careful sketches of the form of the head in all the genera, that I might not depend on that treacherous guide, memory.
