The following aspects are analyzed: air, water and land pollution from underground coal mines, surface mines, coal preparation plants, coal combustion, schemes for pollution control, water treatment plants, reducing emission of pollutants from power plants, reducing environmental pollution by mineral wastes through their use in underground mines, reducing size of external spoil banks in surface mines using mining schemes with internal spoil banks , air pollution abatement by use of new combustion systems, land reclamation in surface mines, methods for monitoring environmental pollution and efficiency of pollution control. This first published genome of a basal hemimetabolous insect, provides an out-group for comparison with other sequenced insects, and paves the way to elucidate molecular mechanisms in Negative selection prevents the fixation of deleterious alleles. The UPC appears as a barcode symbol with 12 digits printed below it.
