Above the mantle, Earth has. Oceanic crust is usually only about 5 miles 8 km thick.

Get Earth and Space

Even faster, we zip along at 107 226 kph or 66,627 mph with the Moon about the Sun. The still air of the stratosphere contains the ozone layer, which was created when ultraviolet light caused trios of oxygen atoms to bind together into ozone molecules. Solar Eclipse - How it appears from different parts of Earth? With a population of over 2 million people, Lusaka is one of the fastest developing cities in southern Africa.

10 Exceptional Images Of Earth From Space

So over time the composition changes. Lusaka National Park is easily identifiable as a brown patch of land just southeast of the city.

Earth

There were two classes I got to do a lot of drawing in: One was geology and the other was art.
