PERI

Trade policies involve customs duties more than quantitative controls.

2.3 Macroeconomic objectives

Influence on Money Supply There are several factors affecting the money supply: spread between the discount rate and federal funds rate, required reserve ratio and open market operations. It is, however, because of growing inter- connectedness and interdependence between different nations in the globalised world, the task of fulfilling this macroeconomic policy objective has become more problematic. A high and stable level of employment is important because of the associated costs to unemployment and the irretrievable loss in potential output.
