Globalization in transition: The future of trade and global value chains

The role of ocean heat transport changes in explaining climate change has become a topic of considerable interest.

How to tackle the new geography curriculum

The Philippines has long been particularly vulnerable to extreme weather.

Globalization in transition: The future of trade and global value chains

Yet each question embodies fundamental geographic dimensions—dimensions that are ignored at society's risk.

Global land change from 1982 to 2016

I do not believe that amongst the scientists there is a discussion as to whether global warming is due to anthropogenic effects. Cretaceous deep-water temperatures, derived from the oxygen isotopic composition of benthic foraminifera, are as warm as 15 to 17 degrees. Major crop losses and lack of drinking water created severe problems for local residents.
