## Secure content based image retrieval system using deep learning with multi share creation scheme in cloud environment

Also, notice that we assumed knowledge of which integer  $s$  the desired posting was located in, how many bits to shift by, and which masks to use.

### Omnisearch index formats

We call the lists of IDs postings lists, and each ID added to a list is a posting. In order to overcome these issues, this article introduces an effective secure IR scheme using Inception with ResNet v2 SIRS-IR and Multiple Share Creation MSC scheme. This eliminates the need to pre-allocate a worst-case number of metadata blocks for a postings list.

## Secure content based image retrieval system using deep learning with multi share creation scheme in cloud environment

To learn more about the active postings list format, see.

## Secure content based image retrieval system using deep learning with multi share creation scheme in cloud environment

Metadata was also stored in blocks of 64 32-bit integers. Our solution was to pre-allocate a worst-case number of metadata blocks.
