I am only partially joking about that. The existence of things around us and even us is dependent on Atoms and molecules. Let us understand this concept with the help of an example as well.

**See Inside Atoms and Molecules**

Just like how in a building, brick is the most fundamental substance combining with other bricks to make the building or how a tiny grain of sand is nothing in itself but can create a whole dessert altogether when many of them combine. All the mass of the atom is also concentrated in the nucleus of the atom.

### **A new approach to film atoms and molecules vibrating inside solids**

In a molecule, two atoms are held together by an intricate bonding between their electrons.
