

# Concerning neurological nomenclature

## s.n. - Functional neurologic disorders/conversion disorder

Description: -

-

Etiology (Axis I)			
Nervous system pathology	Inherited or acquired		
	Inherited	Acquired	Unknown
Evidence of degeneration	Autosomal dominant	Perinatal brain injury	Sporadic
Evidence of structural (often static) lesions	Autosomal recessive	Infection/inflammation	Familial
No evidence of degeneration or structural lesion	X-linked recessive	Drugs	
	Mitochondrial	Toxic	
		Vascular	
		Neoplastic	
		Brain injury	
		Functional

## The Precise Neurological Exam

Benign Essential Blepharospasm BEB is a progressive neurological disorder characterized by involuntary muscle contractions and spasms of the eyelid muscles. A rare degenerative disease of the brain involving the grey matter.

## Neurodevelopmental disorder

After the spike protein binds with the ACE2 receptor in the target cell, the viral envelope fuses with the cell membrane and releases the viral genome into the target cell.

## Pathogenesis and pathophysiology of functional (psychogenic) movement disorders

The patient may be asked to swallow and a tongue blade may be used to elicit the gag response. CT SCAN - computed tomography scan A diagnostic imaging technique in which a computer reads X-rays to create a three-dimensional map of soft tissue or bone. Again, networking with leaders and giants in the field, as well as peers, is an invaluable aspect of joining the CNS.

## Neurodevelopmental disorder

NEUROLYSIS - Removal of scar or reactive tissue from a nerve or nerve root. The bulge in a blood vessel can burst and lead to death at any time. AMNESIA - Loss of memory caused by brain damage or by severe emotional trauma.
