Hydrogen Aircraft Technology

Significant weight savings were achieved by replacing one of the two metals containing active masses with hydrogen gas. And this new direction is likely, as in Europe, to be accompanied by public money. Source: Boeing Airbus committed to bringing to market a zero-emissions, hydrogen-powered aircraft by the middle of the next decade.

Hydrogen

Hydrogen would be used for fuel cells, which powers electric engines positioned like conventional turbofans under the wings. So a few brave souls are looking once again at the idea of hydrogen-powered flight. Since then, more than 300 GEO satellites have been equipped with Ni—H₂.

This aviation startup is soaring ahead with hydrogen

Several solutions are under consideration, from sustainable aviation fuels SAFs to electric aircraft, to hydrogen propulsion. On the evidence to date, market development and forces alone are unlikely to enable these technologies to break out of these relatively limited uses.

4 Hydrogen Stocks That Are Ready to Charge Your Portfolio

Hydrogen has the advantage of being obtainable by various methods on an industrial scale, sustainable, and of ensuring economic combustion and without pollution.

World's largest hydrogen

If LH₂-powered aircraft are deployed where they are the most useful, the study thinks some forty percent of the fleet will be hydrogen-powered in 2050.

This aviation startup is soaring ahead with hydrogen

The infrastructure is what has prevented fuel cell cars from taking off.
