## Contrasting physiological and structural vegetation feedbacks in climate change simulations

When no wind is present, a layer of still air builds up around each leaf.

## Deciduous Forest Biome: Temperature, Climate, Location, Plants, Animals

Y3ZZ15101A , the Natural Science Foundation of China No.

## Vegetation's responses to climate variability

By repeating this process 1000 times, the confidence intervals were determined, and only significant values were shown to show the model agreement. The two DGVMs' different complexity of eco-physiological processes also impacts on vegetation requirements for rainfall due to the physiological effects that more efficient water use of vegetation is facilitated under elevated atmospheric CO<sub>2</sub> concentration.

## CAB Direct

In: Solomon SD, Qin D, Manning Z, Chen M, Marguis M, Averyt KB, Tignor M, Miller HL eds Climate change: the physical science basis. Snow-free albedo shows a similar but less pronounced relationship.

## Vegetation's responses to climate variability

Mid-latitude afforestation shifts general circulation and tropical precipitation.
