**Lawn Care 101, Basic Turfgrass Management Principles**

One such benefit is a reduction in the amount of surface runoff water. One can trample it, tear it, and mow it, and it grows back! John Madison was the first university turfgrass researcher UC Davis to think and write of the management of fine turfgrasses in an environmentally systematic way. And a golf course or turf area can absorb far more than one inch of rain water without runoff, assuming it's not coming down too quickly.

## Water

Madison was a bit of a hippy and flake, but a visionary. Returning grass clippings when mowing also helps to reduce evaporation of water from the soil surface. In these situations, more water conserving plant materials might be used.

## Practical turfgrass management (1971 edition)

Implementing the correct management practices allows one to maintain a healthy lawn and also helps turfgrasses tolerate or recover from environmental stresses and pest injuries.

## Turfgrass Management

Water right: conserving our water, preserving our environment.
