What Is a Supernova?

Cosmic explosions in three dimensions: Asymmetries in supernovae and gamma-ray bursts.

Supernova (2020)

This cloud of material sweeps up surrounding during a free expansion phase, which can last for up to two centuries. In 2014, scientists detected the faint, hard-to-locate companion star to a Type Ib supernova. In these type of supernovae, the gravitational potential energy is converted into kinetic energy that compresses and collapses the core, initially producing from disintegrating nucleons, followed by all of thermal neutrinos from the super-heated neutron star core.

SuperNova Wig: Sale High Quality Hair Wigs

Sam and Tusker are traveling across England in their old RV to visit friends, family and places from their past.

Supernova movie review & film summary (2021)

In type IIb supernovae the hydrogen atmosphere of the progenitor is so depleted thought to be due to tidal stripping by a companion star that the light curve is closer to a type I supernova and the hydrogen even disappears from the spectrum after several weeks.

Supernova (2000)

These injected elements ultimately enrich the that are the sites of star formation. If the relativistic jets are too brief and fail to penetrate the stellar envelope then a low luminosity gamma-ray burst may be produced and the supernova may be sub-luminous.

Supernova (2000)

Bright types may be a continuum from slightly over-luminous to hypernovae. Type II_n supernovae are characterised by additional narrow spectral lines produced in a dense shell of circumstellar material. However, the current view is that this limit is not normally attained; increasing temperature

and density inside the core as the star approaches the limit to within about 1% before collapse is initiated.

Supernova

Core collapse supernovae are on average visually fainter than type Ia supernovae, but the total energy released is far higher. These are called type II_n, where the 'n' stands for 'narrow'. The name is formed from the prefix SN, followed by the year of discovery, suffixed with a one or two-letter designation.
