## Bovine tuberculosis in Latin America and the Caribbean: current status, control and eradication programs

Well-documented examples of such spread include infection in badgers *Meles meles* in the United Kingdom and possums *Trichosurus vulpecula* in New Zealand. Preparation and Culture of Samples Lesions from suspected animals 10—25 mg were processed and inoculated in duplicate into Stonebrink medium.

### Tuberculosis: a re

Again, that the fundamentals of the control of an infectious disease require to be kept in mind at all stages of the investigation and management of the outbreak; otherwise, wrong conclusions and decisions may result, with untoward consequences both for the herdowner and the programme. The lack of detection of IFN $\gamma$  characterizes the negativity of the animal to infection M.

### *Mycobacterium bovis*

Fritsche A, Engel R, Buhl D, Zellweger JP, 2004.

## Bovine tuberculosis in Latin America and the Caribbean: current status, control and eradication programs

Although no specific studies have been performed, it seems that M. According to Barbara Gutmann Rosenkrantz, the late 19th-century discovery of the relationship between bovine and human tuberculosis led to state and federal attempts to stamp out bovine tuberculosis. Isolation of *Mycobacterium bovis* from human cases of cervical adenitis in Tanzania: A cause for concern? Tuberculosis in cattle: classifying breakdown episodes as a basis for decision making in eradication programmes.

Tuberculosis in cattle: the results of the four-area project. It was also observed that control policy is either not in place or inadequately implemented in the study area.
