

# Surface specific characterisation of thiophene-generic adsorption systems.

University of Manchester - Brack

Description: -

-Surface specific characterisation of thiophene-generic adsorption systems.

-Surface specific characterisation of thiophene-generic adsorption systems.

Notes: Thesis (Ph.D.), - University of Manchester, Department of Chemistry.

This edition was published in 1996

**Brack**

O'Hern for technical assistance and insightful discussions. Patzelova, Zeolites 3, 163 1984.

**Synthesis, characterization and determination of the metal ions adsorption capacity of cellulose modified with p**

Characterization The quantity of p-aminobenzoic groups attached to the cellulose surface was determined by nitrogen elemental analysis, using a SHIMADZU EA-2218 CHNS-O elemental analyzer.

**Thermodynamic Characterization of Sodium Alginate by Inverse Gas Chromatography**

Static friction at fractal interfaces. POU water purification systems often comprise materials that adsorb contaminants, the most common being activated carbons obtained by a variety of methods. Clicking on the donut icon will load a page at altmetric.

**Carbon nanotube membranes with ultrahigh specific adsorption capacity for water desalination and purification**

This means that it can be used in the packaging food and biomedical field. Journal of Chemical Information and Modeling 2018, 58 2 , 244-251. The lower percentage removal efficiency from these activated carbons might be due to the saturation of active site on the surface of AC.

**Carbon nanotube membranes with ultrahigh specific adsorption capacity for water desalination and purification**

Some reactions is usually the result. The colour changed from red to transparent, indicating that almost all the NPs were removed by the UCNT membrane.
