Hot Flashes: What Can I Do?

Addressing hormonal imbalances in this phase requires the same attention to diet and toxin exposure as the puberty phase. Long-term use of estrogen replacement may result in a higher chance of developing liver tumors or cancer, glucose intolerance, high blood pressure, sensitivity to sun exposure, and greater than normal levels of calcium in the bloodstream. The use of HT should be made on an individual basis, after careful consideration of quality of life and personal risk factors.

Estrogen, not testosterone, plays key role in revving women's sex drives

Cycle Syncing: Hormone Balancing, Exercises, Food, and More

This comes as good news for older women, especially given the fact that online dating site RSVP reports that its 50-plus female base has doubled over the last decade, with the last few years seeing the highest growth. Spontaneity can spice things up during this week and keep things exciting and frisky.
