Coastal Erosion

July 2019 became the all-time hottest month on record for Boston, Massachusetts; Hartford, Connecticut; and Portland, Maine. Entering 2019, there had only been two weeks May 21st, 2002 and May 2nd, 2017 where the entire Midwest had no areas designated as abnormally dry. Drought conditions improved slightly for Puerto Rico.

USDA ERS

Since 2016, cropland rental rates have increased the most in the Pacific 17. A November nor'easter caused severe beach erosion and damage on Long Island's South Shore.

18. Wetlands

The other fatality was from an EF-3 tornado that struck near Mercer, Ohio on May 27th. There were several impacts from the drought in September and October. There was brief improvement in early September, but conditions deteriorated rapidly.

Missouri Department of Natural Resources

However, some areas that have not received adequate water have not recovered to pre-drought conditions. Record-high water levels were reached at four stream gauges in New York and one in Vermont. Missouri shares its water with bordering states, 26 other states as either an upstream or downstream state and two Canadian provinces.

Missouri Department of Natural Resources

Pressures Water availability Water availability is the most significant pressure on the health of wetland ecosystems. Several stations across the region observed their highest count of September days with a maximum temperature at or above 90 degrees F 32.

National Climate Report

Records for both Livingston and Glasgow began in 1948. Geological Survey's offers a Coastal Vulnerability Index that can help identify locations where coastal erosion may occur along undeveloped coastlines.

Publications

CLM includes long-form articles, events listings, publication reviews, new product information and updates, reports of conferences and letters. On April 19th, a low pressure system intensified and a line of thunderstorms with embedded supercells tracked northeast through the region. Like the swan census, this will provide valuable additional information for waterbirds occupying areas outside the usual IWC wetland network.

International Waterbird Census 2020

A rare Flash Flood Emergency was issued by the National Weather Service for Washington, D. As of October 15, the salt line on the Delaware River was 11 miles farther upstream than usual for October due to little rain and less runoff flowing downstream.
