## Standard Uranium Begins Phase II Winter Drill Program at its Flagship Davidson River Project TSX Venture Exchange:STND

About East Preston Azincourt is currently earning towards 70% interest in the 25,000+ hectare East Preston project as part of a joint venture agreement with Skyharbour Resources TSX.

## Uranium Mining in Saskatchewan and Energy Potential — Bit Service Company

Camco cited poor economic conditions in world uranium markets as the reason to halt proceedings.

## Athabasca Basin

The next largest producers are Australia, Kazakhstan, Russia and Niger. Gulf optioned five Dynamic Group Exploration permits and proceeded to follow up on 34 high priority radioactive anomalies. Baselode's Hook also covers a few uranium showings of interest, including the Art Lake pegmatite radioactive showing which displays secondary uranium stains at surface, and a boulder train with anomalous radioactivity.

## Project Overview

A copy of the NI 43-101 Technical Report that summarizes the exploration on the Project is available for review under Standard Uranium's SEDAR issuer profile.

## Baselode Energy acquires second uranium property in Athabasca region

Prior programs have seen very limited drill testing of these target zones.

## How Athabasca uranium deposits were discovered from the air

Unconformity-related uranium deposits in the Athabasca Basin are closely related with basement conductive packages like we see at Moore, so we believe there is a lot more uranium to be discovered in these underlying basement rocks. Extensive amounts of environmental monitoring are required and completed near each uranium mining and milling operation in northern Saskatchewan, yearly.
