The second focuses on explaining the causes of degradation through the study of littoralization and its various mutations at the regional and local level. .

On donne enfin des formules explicites permettant de construire une suite exhaustive d'idempotents dans l'algèbre de Banach engendrée par un semi-groupe fortement continu ne vérifiant pas la minoration au voisinage de l'origine. The diachronic, deals with evolution over time, of the interactions between coastal occupation and natural landscape.

Jāmi'at Wahrān [WorldCat Identities]

It analyzes the different modes of occupation of the coastal area, and addresses the interactions between different components of the landscape at the ecological, economic and social level. The third and final section is devoted to the study of management tools, the main actors involved and the use conflicts around the issue of environment and coastal land, in order to end up finally to a set of proposals for an integrated management of coastal areas in Algeria, in general, and the west coast in particular. The first deals with environmental issues by three entries: the disruption of coastal dynamics, the loss of biodiversity and degradation of the natural landscape.

Jāmi'at Wahrān [WorldCat Identities]

It focuses on the man - environment relationship by combining the knowledge of physical geography to human geography. The multiscalaire, deals with an analysis of various phenomena through several layers of scales, from local to global, and vice versa by Zohra Bendaoud Book 1 edition published in 2008 in French and held by 2 WorldCat member libraries worldwide Le but de cette thèse est, d'une part d'étudier certaines inégalités valables dans les algèbres de Banach ne possédant aucun idempotent non nul, et d'autre part d'expliciter des idempotents dans les algèbres de Banach ne vérifiant pas ces inégalités.

Jāmi'at Wahrān [WorldCat Identities]

Two methods are applied: one diachronic and the other multiscalaire. The thesis is structured in three parts, and includes analysis based on case studies.

Jāmi‘at Wahrān [WorldCat Identities]

On améliore également la condition de Esterle-Mokhtari concernant la norme de condition qui permet de conclure qu'un semi-groupe admet une limite en norme à l'origine, quand est un entier.
