Campaign to protect Dorset's heathland

But Forestry England has already replanted a large part of the 220-hectare area burned in the fire, which was thought to have started due to a disposable barbecue or campfire. Wildlife and habitat recording The UHP monitoring and wardening team assist partners as required with all recording of wildlife and habitat information for sites within their area. Crews had to contend with a 400 yard wide wall of flames that moved at dangerous speeds.

Changes on the heathlands in Dorset, England, between 1987 and 1996

Zoological Museum, University of Bergen, Report No. Most undergo a cyclical succession as the heather plants pass through four definable growth-phases over a period of about 30 years. Analysis of both the spider and beetle data indicated that the species assemblages were primarily influenced by the growth-phase of the heather.

Wareham Forest blaze: 'One of most devastating forest and heath fires in Dorset in living memory'

The obligation is termed a Section 106 Agreement. Beacon Road also hosted its first Wildfire Community Preparedness Day in May, 2019.

Dartford warbler

Random counts are also carried out by UHP wardens who count cars at any parking area they visit within their working day. This year marks the 15 th successive Operation Heathland, which runs between 31 March 2014 and 28 September 2014. Site user surveys Site user surveys are carried out to find out who visits the heaths, why, what they do, where they go and how and where they are travelling from, and their opinions of the sites.

Monitoring the Dorset heaths

How to identifyThe Dartford warbler is a small, dark brown bird, with a long tail, a distinctive red eye-ring and a cherry-red breast. Also, the

participation in the LIFE-Nature project allowed for collection of necessary evidence and development of experience in application of various alleviation measures.

Some of the nationally rarer species are associated with the open conditions of recently-cut or burnt heathland. . The first survey results were collated by Natural England and Footprint Ecology.

Dorset heathland home to thousands of wild animals destroyed in fire

Although botanical diversity is extremely low, and although it is a non-natural ecosystem maintained by fire and grazing management to prevent a succession to woodland, arthropod diversity can be extremely high.
