## 4 Major Aspects of Human Growth and Development

Since each child grows in his own unique way, it is but opposite that parents and teachers should treat each child as a unique individual and provide for this special needs and interests. Erikson also viewed the elder years as a time of reflection back on life. Intellectually, adolescence is the

The child at this stage develops better concepts of length, distance, time, area and volume.

### **Stages of Human Development: What It Is & Why It's Important**

Sigmund Freud Sigmund Freud was a Viennese physician who developed his psychosexual theory of development through his work with emotionally troubled adults. Adolescents who still deeply depend on their parents for social interaction and guidance may experience more role confusion than teenagers who pursue their own interests.

### **what is human developmental psychology and how does psychology**

Stagnation When people reach their 40s, they enter the time known as middle adulthood, which extends to the mid-60s.

### **Human Growth & Development in Psychology**

Attachment in infants is primarily a process of proximity-seeking to an identified attachment figure in situations of perceived distress or alarm for the purpose of survival.

### **Growth and Development in a Child**

Increased health concerns mark this period of development, and some individuals may experience mental declines related to dementia.
