Tycho Brahe (1546

He published his account in *De mundi aetherei recentioribus phaenomenis* The world's recent ethereal phenomena 1588 where he draws cosmological conclusions from the fact that his measurements show that the comet is not closer to Earth than the Moon, contradicting 's model of the cosmos. The International Coronelli Society for the Study of Globes, founded as Coronelli-World League of Friends of the Globe in Vienna in 1952, is a non-profit organization whose purpose is to foster the study of old and modern terrestrial and celestial globes, lunar globes and globes of planets as specific cartographic expression forms, and to promote research on globes and globe related instruments in their historical and socio-cultural contexts. Most of the work involved making the hollow wooden globe as perfectly spherical as possible, after which it was covered in brass plates.

Tycho Brahe'nin aletleri

Its most important aims and activities are to publish the scientific journal *Der Globusfreund* respectively *Globe Studies* and to organize international scientific symposia.

Tychonis Brahe Astronomiae instauratae mechanica

Jorgen Brahe and his wife Inger Oxe had no children of their own, and they acted as foster parents to Tycho until Jorgen's death. A consequence of this was that Tycho developed an interest in medicine and alchemy. Thanks to the precision of Tycho's measurements, Kepler discovered the first two laws of planetary motion and that the Martian orbit was elliptical, not circular as previously believed.

Tycho Brahe's Description of His Instruments and Scientific Work: As Given ...

Although he drank a little overgenerously and experienced pressure on his bladder, he felt less concerned for his state of health than for etiquette. His plan of the gardens, from the same work, with the main building in the centre and servants' quarters, a printing studio, and other buildings just inside the outer walls is at. By the time he returned home he could not urinate any more.

Tycho Brahe's description of his instruments and scientific work, as given in *Astronomiae instauratae mechanica* (Wandesburgi 1598) in SearchWorks catalog

He knew that accurate observations required good instruments and he began to acquire them. Tycho became quite adept at designing scientific instruments and making observations during his early travels in Europe.
