Their discoveries represent clearly a break-through that immediately incited a fervent research activity the whole world over. This contrasts starkly with Platonic essentialism, which requires a typology created from the top down. But in wanting to have a science of mind based upon biology, I would argue that his reductionist approach leaves many questions unanswered.

Obvious questions: - Does the theory stand the test of time? A surprisingly difficult read for a book targeted at a non-technical audience, I felt happy to have pushed through the hard parts. But, also, consciousness in the brain is associated with evolving structures that in no way resemble the point-to-point wiring systems in computers.
