GeoMan's Mineral and Rock Glossary

Such electrons may be associated with transition elements, charge transfer interactions, or color centers.

GeoMan's Mineral and Rock Glossary

Horse - A mass of waste rock lying within a vein or orebody. Hydrometallurgy - The treatment of ore by wet processes, such as leaching, resulting in the solution of a metal and its subsequent recovery.

A Glossary Of The Mining And Mineral Industry

Examples are limestone, shale and sandstone. Field: Term used to indicate the real world, outdoors, where the minerals and rocks live. Subhedral: Some external crystal form is visible.

A Glossary Of The Mining And Mineral Industry

Carbon-in-pulp - A method of recovering gold and silver from pregnant cyanide solutions by adsorbing the precious metals to granules of activated carbon, which are typically ground up coconut shells. Flux - A chemical substance that reacts with gangue minerals to form slags, which are liquid at furnace temperature and low enough in density to float on the molten bath of metal or matte.

A glossary of mineralogy : Bristow, Henry William, 1817

Cleavage - The tendency of a mineral to split along crystallographic planes. Anthracite - A hard, black coal containing a high percentage of fixed carbon and a low percentage of volatile matter. Therefore, if the weight of a mineral specimen is three times that of the volume of water it displaces, its specific gravity is three.

A Glossary of Mineralogy by Henry William Bristow

In contrast to the isomorphous series, it is also common for a single compound composition to occur with different crystal structures. Blackjack -

A miner's term for sphalerite zinc sulphide. Zone - An area of distinct mineralization.
