TOP 10 BIGGEST SHARKS IN THE WORLD

This practice affects many different shark species, including whale sharks. Many species are threatened with extinction, with some families of rays such as sawfishes in peril. Did you know there are around 500 known? Some members of the *Carcharhinus* genus—most notably the C.

Sharks

They also do not need to move to breath like other sharks. Millions of these sharks continue to be fished annually to supply the persistent demand for their fins and meat.

50 Amazing Shark Facts

They use this trick to attract mates and confuse their prey. Beautifully streamlined and powerful swimmers, those open-ocean sharks are adept at feeding on fast , , and the like. They also have really oily livers which helps them stay balanced in deeper waters.

All About Sharks for Children: Animal Videos for Kids

Controls on fishing are woefully insufficient.

All About Sharks for Children: Animal Videos for Kids

Smaller sharks tend to hunt along the ocean floor, while larger sharks hunt in the middle and by the surface. Sharks lose teeth regularly and can go through 30,000 teeth in their lifetime. Though there are exceptions, sharks typically have a tough skin that is dull gray in colour and is roughened by toothlike.
