The mechanical, morphological, chemical, water absorption and thermal properties of biocomposites were studied. The project involved working with relevant local counterparts for proper design, installation and management of rainwater tanks for effective rainwater harvesting from schools and households in Philippines. These thermal stress values can even exceed the stress values induced by the live and dead loading in case of no or little thermal insulation and could lead to severe damages if not considered during the design.

This experimental work presents the carbonation and strength behaviour of self-compacting concrete with coal bottom ash that was exposed to cyclic wetting-drying processes under condition of seawater environment. In this research, the performance of bamboos as an alternative material in reinforced concrete has been evaluated.
