## Issues in the Assessment and Diagnosis of Culturally Diverse Individuals

Is a decrease in auto injuries an effect of a new seat-belt law? The trait approach to personality is one of the major theoretical areas in the study of personality. While this kind of research is cross-sectional in character, statements about historical processes are often invoked to explain the correlations.

### Labeling theory

Emphasis should be placed on the successful integration of science and practice, where the relationship between the two variables is carefully considered. There was an up and down pattern in self-esteem, however, and it was suggested that, rather than simply gradual erosion of self-worth and increasing tendencies, people were sometimes managing, but struggling, to maintain consistent feelings of self-worth.

## Issues in the Assessment and Diagnosis of Culturally Diverse Individuals

In a later 1973 edition of his work, he answered his critics. There are many examples of these types of structures in the behavioral and social sciences. He wrote: The longer the oppression lasts, the more profoundly it affects him the oppressed.

### A Closer Look at Trait Theories of Personality

Somatic: voluntary muscles and movement info to CNS allows us to walk or pick up a pencil Autonomic: involuntary processes emotions SNS: increase arousal fight or flight high adrenaline PNS: rest or digest, lowers adrenaline, calms us down 10.

### A Closer Look at Trait Theories of Personality

A trait can be thought of as a relatively stable characteristic that causes individuals to behave in certain ways.

**PSY168**

The core of this methodology is participant-observation, in which a researcher spends an extended period of time with the group under study, ideally mastering the local language, dialect, or special vocabulary, and participating in as many activities of the group as possible.
