What Are Fossils and How Do They Form?

Organisms like jellyfish with no hard parts like bones or shells are rare in the fossil record because they are less likely to be preserved. For example, scientists have found dinosaur footprints in rock that formed from mud.

Rare Fossils: Museum Quality Specimens Here

As a result, this issue of biogenicity is of primary concern for scientists working in Archean and Proterozoic rocks, but can also be a problem for poorly known or poorly preserved fossils. Late stone age fishermen of Lothagam, Kenya. We offer rare specimens for discerning collectors and natural history museums and also cater to wholesale clients.

What is a Fossil?

Please be sure about what you are trading for. Earth and Planetary Science Letters.

What is a Fossil?

Special environmental conditions are generally required to form one of these sites — either the animals were quickly killed and buried through anaerobia lack of oxygen or volcanic ash, or the water chemistry was particularly good at preserving the bodies.

Fossils For Sale

Other forms have shells of calcium phosphate which also occurs in the bones of , or. We have found many interesting fossils, and hope you find them interesting as well. Smith and unknown 1938 Gert Terblanche Ditsong National Museum of Natural History MH1 Karabo 1.
