

Data were collected from community populations; and as such, findings may not be directly applicable to clinical samples. Although the ideas presented are diverse, all chapters focus on this common theme of the self.

ERIC

In what way is self-actualization different from self-transformation? *Acta Psychiatrica Scandinavica*, 67, 361—370.

Cross

Exploratory structural equation modeling ESEM analysis, which takes into account the characteristics of exploratory factor analysis and confirmatory factor analysis, was performed by using Mplus 7. Materials and Methods Participants A total of 819 undergraduates were recruited, of whom 19 participants provided incomplete information and were removed; thus, the final sample consisted of 800 participants.
