Special Papers

In particular, the acaveate exine and the presence of well developed spines with an uneven arrangement characterize pollen of most members of genera of Stiffiteae and Wunderlichioideae concentrated in the Guayana Highland, some Gochnatieae Mutisioideae s.

Changes of the palynobiotas in the Mesozoic and Cenozoic of Patagonia: a review

Arrow expands to c Danian, locality PL2, holotype MPEF-Pb 5970.

[PDF] Eocene Plant Diversity at Laguna del Hunco and Río Pichileufú, Patagonia, Argentina

The Lefipán localities and LH are located in northwest Chubut, Argentina; PL2 is in the western San Jorge Basin near Sarmiento in southern Chubut; and RP is located in western Río Negro, Argentina. Raiguenrayun cura is a stem representative Fig. Lepidoptera, Gracillariidae, a buddhist pine leaf-miner from Japan: taxonomy, DNA barcodes, damage and parasitoids.

Persistent biotic interactions of a Gondwanan conifer from Cretaceous Patagonia to modern Malesia

Ameghiniana 30 2 : 135—141. Frass, when present, composed of spheroidal pellets measuring ca. The first testimonies of the Atlantic marine ingression correspond to the Salamanca Formation.

Changes of the palynobiotas in the Mesozoic and Cenozoic of Patagonia: a review

Often, these structures are the most important for understanding the evolutionary relationships of flowering plants, and can give important clues to their biology.

Mineralienatlas Lexikon

Much remains to be learned about the rapid radiation of Asteraceae since it is still unclear how its members rapidly colonized all habitats and became so incredibly diverse in a relatively short time interval. First South American *Agathis* Araucariaceae Eocene of Patagonia.
