Sierra Nevada Motorsports Rentals

The Sierra was released in Europe in September 1982, and the performance-oriented XR4i appeared in 1983, slotted into the lineup above the Fiesta-based XR2 and Escort-based XR3. Using body panels from Ford's factory in , the cars were largely hand-built by in ,.

Merkur XR4Ti

A number of automotive customizers produced versions of the XR4Ti that offered increased performance and improved handling. Road power only went up from 204 to 224bhp, but race trim soared from 350 to 550bhp. Side intrusion beams were added to the two doors and the bumpers were stretched to meet US impact requirements.

In order to request information with respect to this product, please click the button below and fill out the form. Upgrades are common but cause problems: standard engines must stay below 330bhp.

Motorsport driving simulator

Interior Recaros are good but cabin is otherwise cheaply made. Copies are common: Ford sold a vast range of development parts and it was possible to uprate to RS500 spec. These versions were often sold as either owner-installed kits or pre-built vehicles.
