Affiliation, Excluding the State of Hawaii By James R.

Critical Minerals in the EEZ

The location latitude, longitude, depth and concentrations of 27 major and trace elements in the most recent growth layers of ferromanganese crusts from 57 dredge sites are presented here, as well as select seawater chemistry at each location. Base map from IBCAO Credit: James Hein, USGS. .

Critical Minerals in the EEZ

A bed of manganese nodules from deep offshore of the Cook Islands.

Marine Mineral Resource Evaluation Research

Just like a pearl, these nodules start with something tiny at the center, such as small rocks, fragments of older nodules and even shark teeth. The sea is thus an inexhaustible source of energy.

Marine resources

IMMS, on occasion, presents its highest honor, , to those who have contributed notably to the objectives and initiatives of the Society. Furthermore, because of the nutrient rich waters rising from below, they provide an important habitat for numerous, and in part, endemic organisms. In addition there are traces of other significant elements such as platinum or tellurium that are important in industry for various high-tech products.

MARINE MINERAL RESOURCES

. Pollution Control: Efforts should be made to keep the seas and oceans free from anthropogenic pollution for rich and healthy condition of marine

environment and ecology.

MARINE MINERAL RESOURCES

A wide variety of minerals form through hydrothermal activity, but seafloor massive sulfides are formed from reduced sulfur and may be enriched in copper, zinc, iron, gold, and silver. This crust sample was collected by dredge from the Marshall Islands at almost 2,000 meters depth on a USGS research expedition in 1989.

Marine resources

Please see the list of PDF. The provides the authority to manage minerals on the OCS and the requirement to provide environmental oversight. B
Non-conventional energy: i Tidal energy.
