Thermodynamic design optimization of a heat recuperator (Journal Article)

Specific equations are given to allow the calculation of fuel savings brought about by the use of recuperators and preheating combustion air. Goldschmidt: Iron and Steel Institute, Special Report No. The parameter values describing the Gibbs energy of each individual phase have been determined by means of a computerized optimization technique.

Progress report

The recuperator was removed from the furnace for an analysis of the failure. A thermodynamic evaluation has been made using a magnetic subregular model for the bcc and fcc solution phases, a multi-sublattice model for the intermetallic phases, and an ordinary subregular solution model for the liquid phase.

Thermodynamics of cesium lead halide (CsPbX_3 , $x = \text{I}, \text{Br}, \text{Cl}$) perovskites

Outside the classroom, students can get involved by joining a professional organization or club. .
