## History of Rocketry and Space Travel

In America, the manned spaceflight programs, , , and later the , culminated in 1969 with the first manned using the , causing the New York Times to retract its earlier 1920 editorial implying that spaceflight couldn't work: Further investigation and experimentation have confirmed the findings of Isaac Newton in the 17th century and it is now definitely established that a rocket can function in a vacuum as well as in an atmosphere. And on April 12, 1981, the Space Shuttle Columbia, first of its breed, lifted off with a crew of 2.

## Spaceline: History of Rocketry

JOHN GARVEY: There was a line that was not hooked up, and as a result, as it was landing, only three of the landing legs deployed, the fourth one did not. A fire beneath the kettle turned the water to steam, which then traveled through pipes to the sphere and was expelled through two L-shaped pipes that caused the sphere to rotate. One of the first model rocketeers we know by name was a young German named Carl Neubronner who, in 1912, built and flew the first rocket-powered aircraft model or full-size in that country.

## History of rocketry & space travel : Von Braun, Wernher, 1912

In fact, the exact date when rockets first appeared is still unresolved. At some point, they attached bamboo tubes to arrows and launched them with bows. After the war, he and some of his rocket team were taken to the U.

## The History of Rockets

These could be the first rockets.

## Rise of the Rockets

Propelling a rocket fast enough to reach space requires something much lighter, moving much faster, like rapidly expanding hot gas.
